

Enable Function Keys in Boot Camp

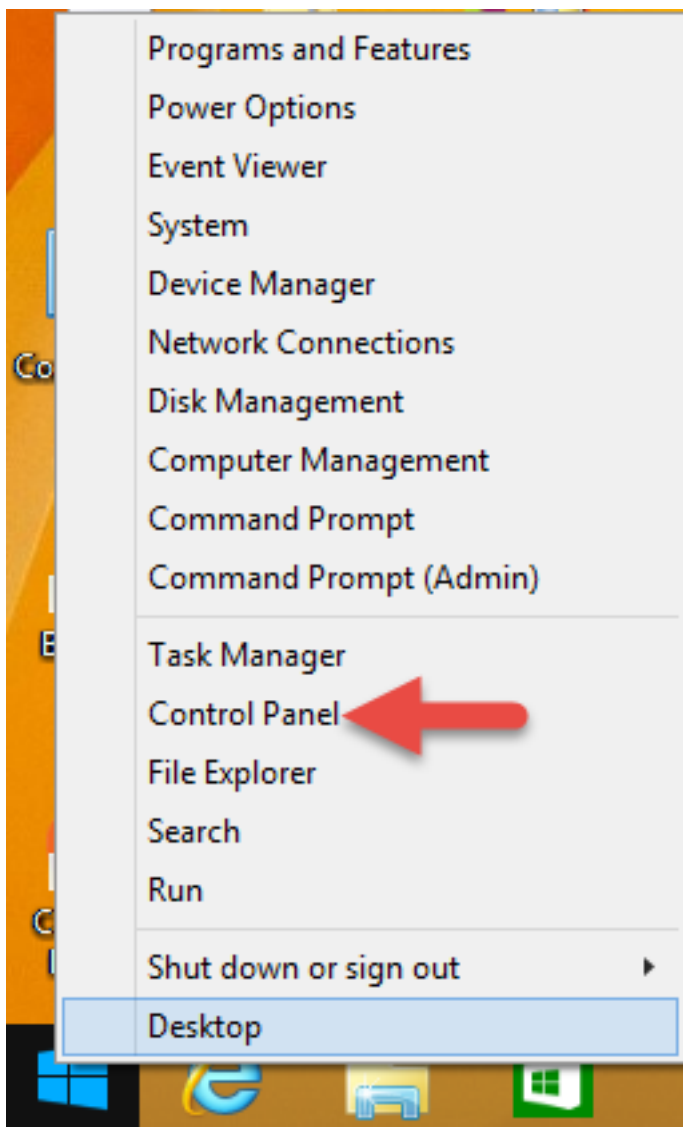

When using Windows on a Mac computer, the function keys (F1-F12) may not work properly when using programs like Case CATalyst. This is because, by default, the function keys control hardware features like increasing the volume, the brightness of the screen, media keys, etc.

This option can be changed so the function keys control software features like Play Audio (Shift-F9) in Case CATalyst.

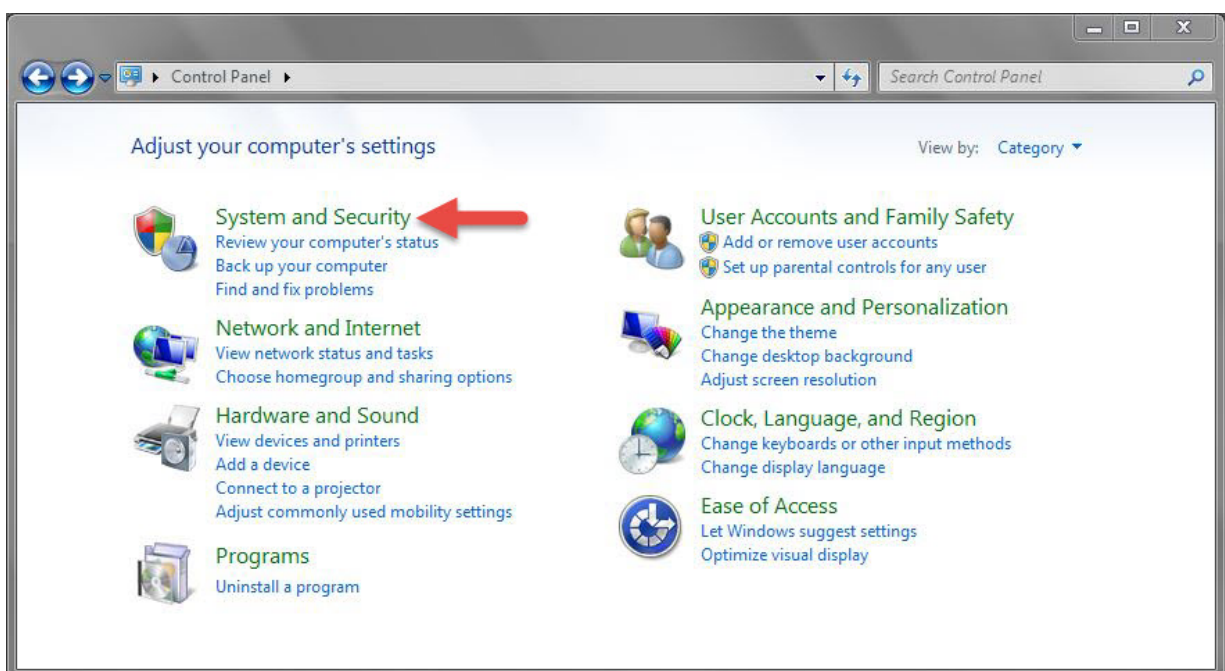

1. In Windows Vista and Windows 7, left click on **Start**, then **Control Panel**.

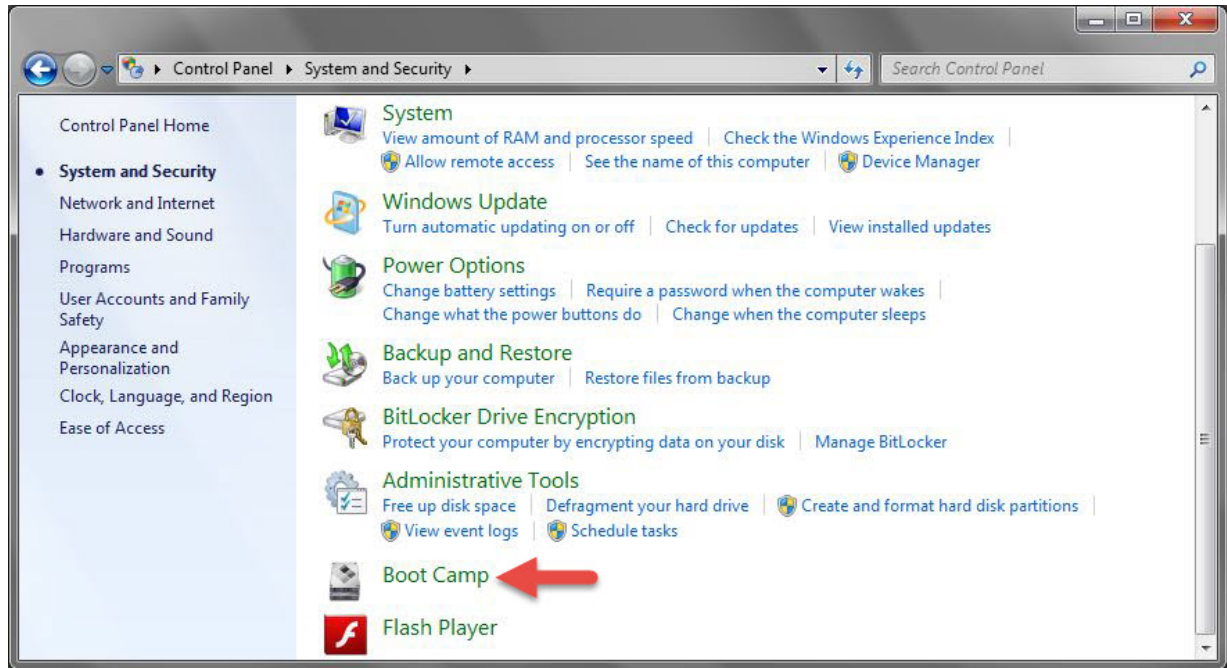

In Windows 8 and Windows 10, right click on **Start** then left click **Control Panel**.

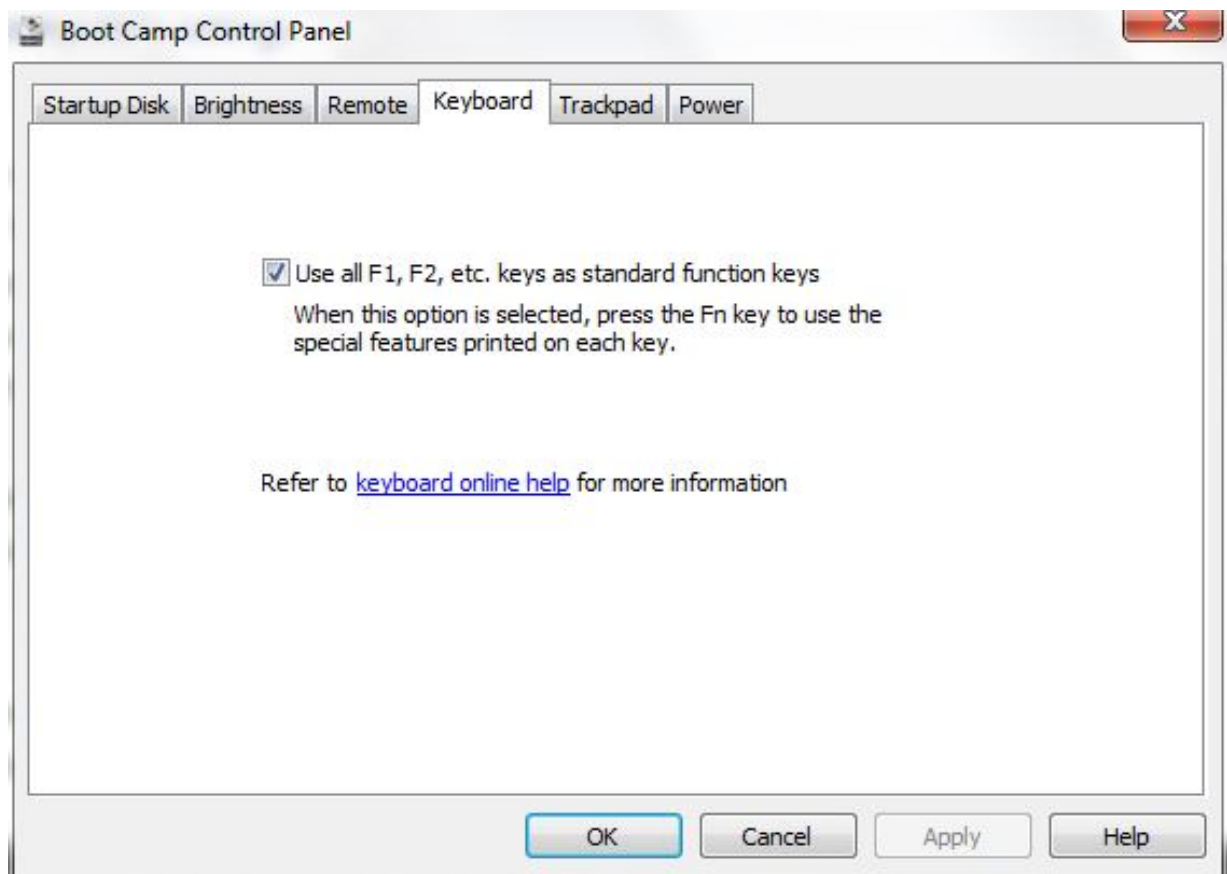

2. The Control Panel window displays. Left click on **System and Security**.

3. Now left click on **Boot Camp**.

4. The Boot Camp Control Panel displays. Left click on the **Keyboard** tab and place a check next to “**Use all F1, F2 etc. keys as standard function keys.**” Click **Apply**, then **OK**.
