

Using CaseViewNet Cloud Gateway

CaseViewNet Cloud Gateway provides realtime streaming of text with virtually any CAT software sending your realtime testimony to participants using CaseViewNet or iCVNet.

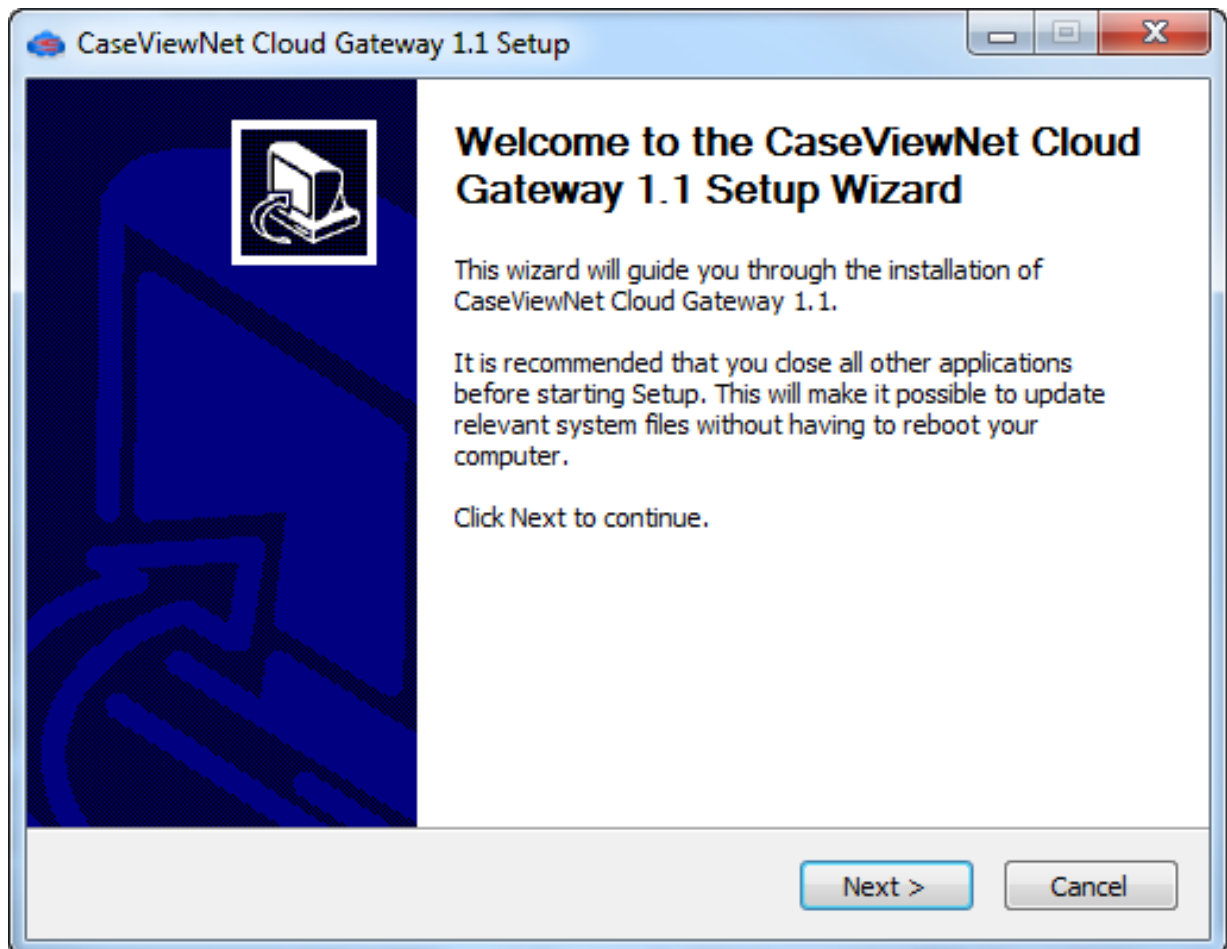

NOTE: An Internet Connection and a [Cloud Session Code](#) are REQUIRED to use this application.

1. Click [here](#) to download CaseViewNet Cloud Gateway and save the file to your Desktop.

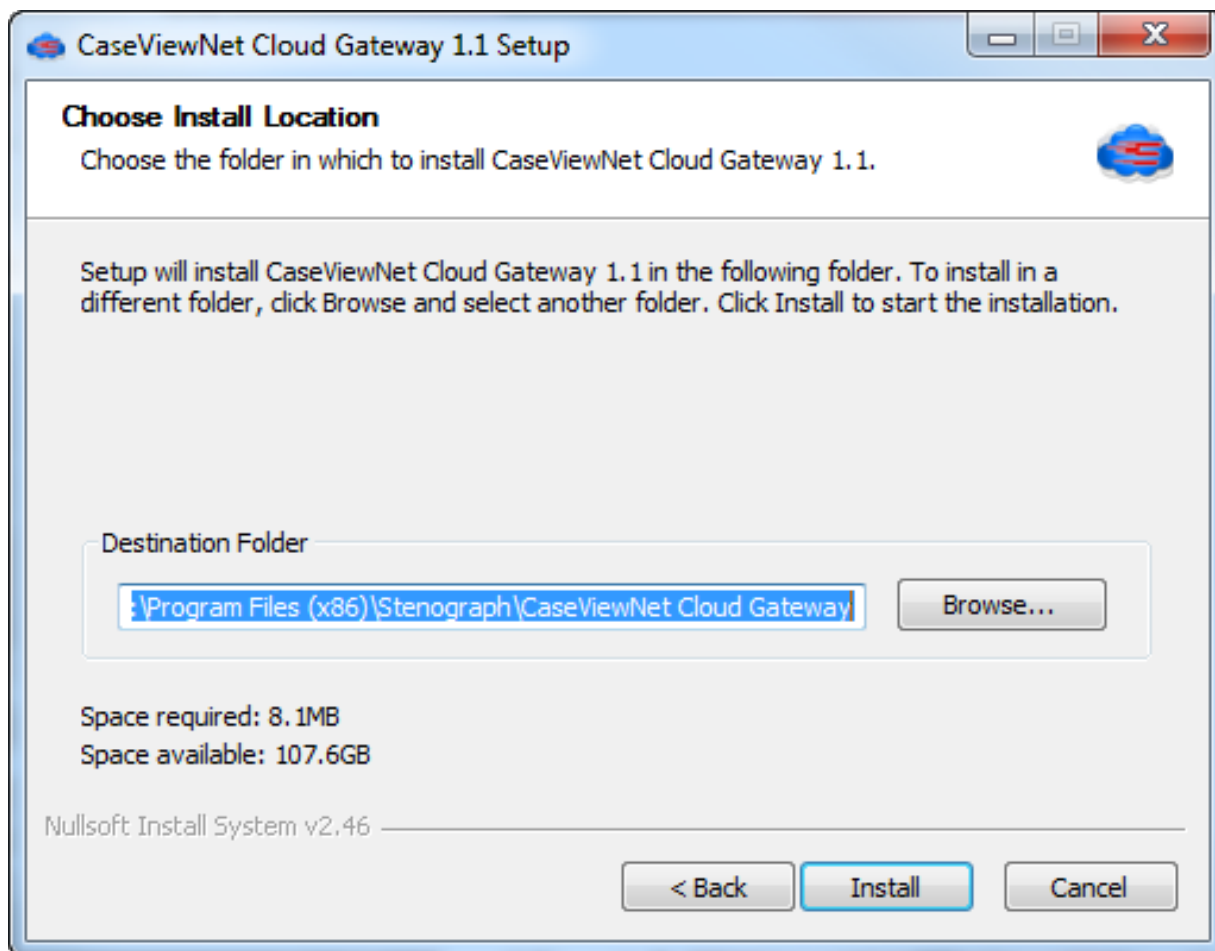

2. Double left click on the **setup.exe** to begin the installation.

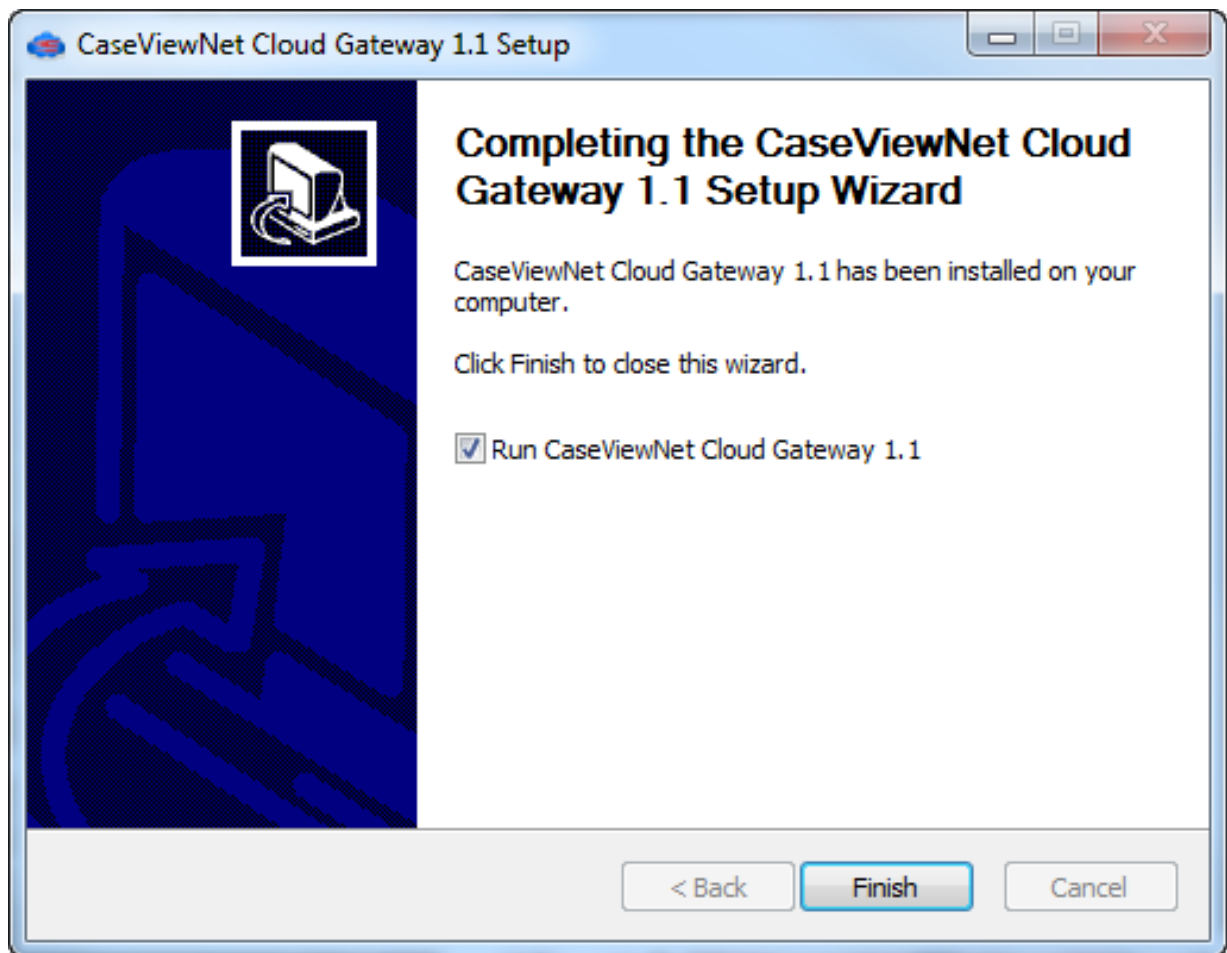

3. At the "Welcome to the CaseViewNet Cloud Gateway Setup Wizard" screen, click **Next**.

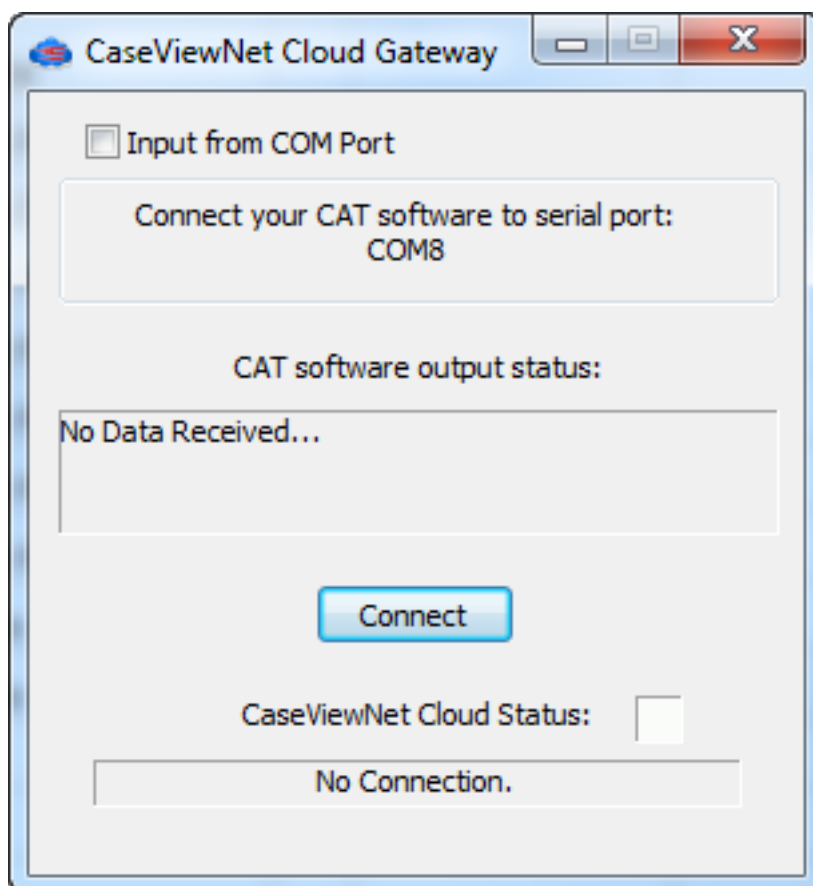

4. At the Choose Install Location screen, click **Install**.

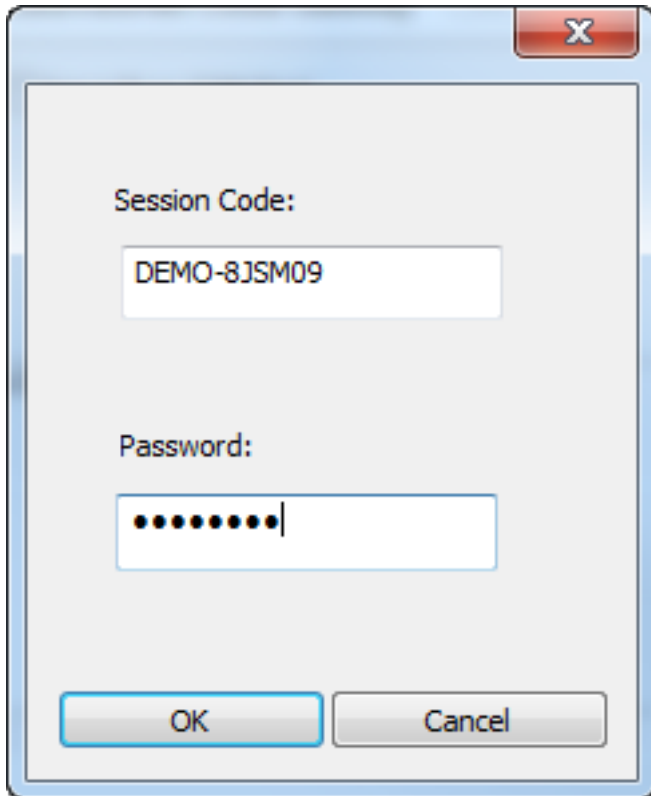

5. The program will install and at the completion screen, click **Finished**.

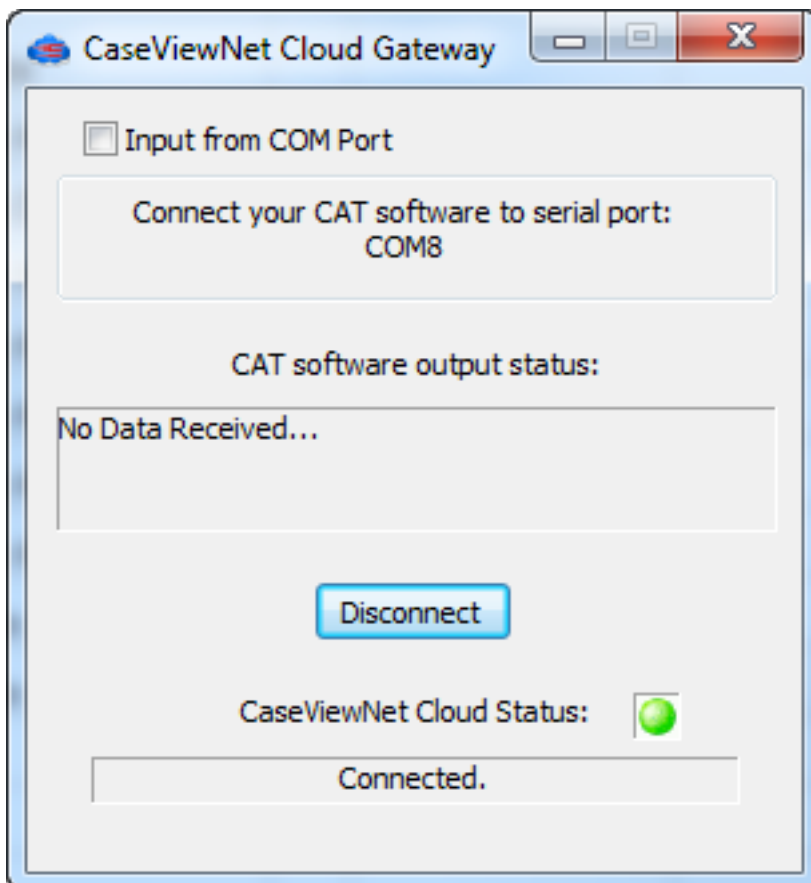

6. CaseViewNet Cloud Gateway will open. Note the serial port assigned to the program. In this example the COM port is 8. Click **Connect**.

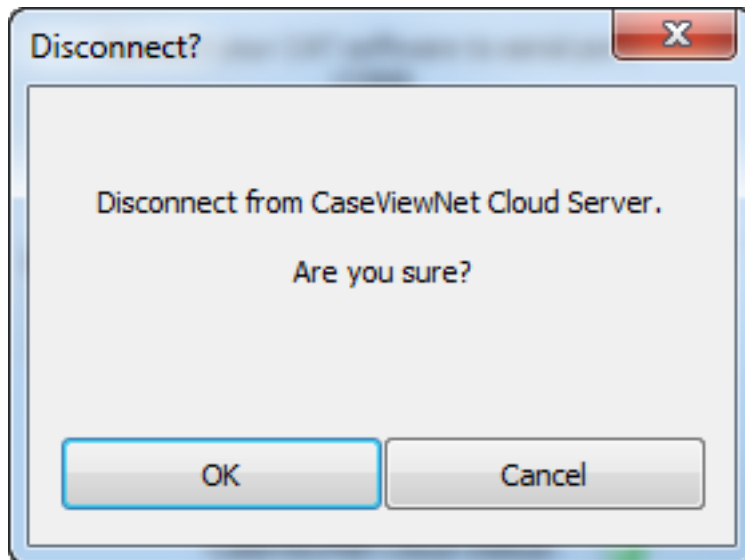

7. Type in your session code and create a password. Clients will need both the session code and the password to receive the feed. Press **OK**.

8. The program will connect and under CaseViewNet Cloud Status:, a green dot will appear as well as say Connected.

9. To disconnect, click the **Disconnect** button. A warning message will appear asking if you're sure. Click **OK**.

10. Set your CAT software to output to CaseView using the COM port created by Cloud Gateway and start a realtime job.
11. Now your clients can connect to you and receive the realtime feed by using either [iCVNET](#) on iPad or [CaseViewNet](#) on a computer.
