

Installing Security Device Drivers on Windows 7

Note: This guide is for customer's using Case CATalyst version 13 or below. Version 14 and above use our keyless security option, e-Key. Visit our [FAQ](#) page for information about e-Key.

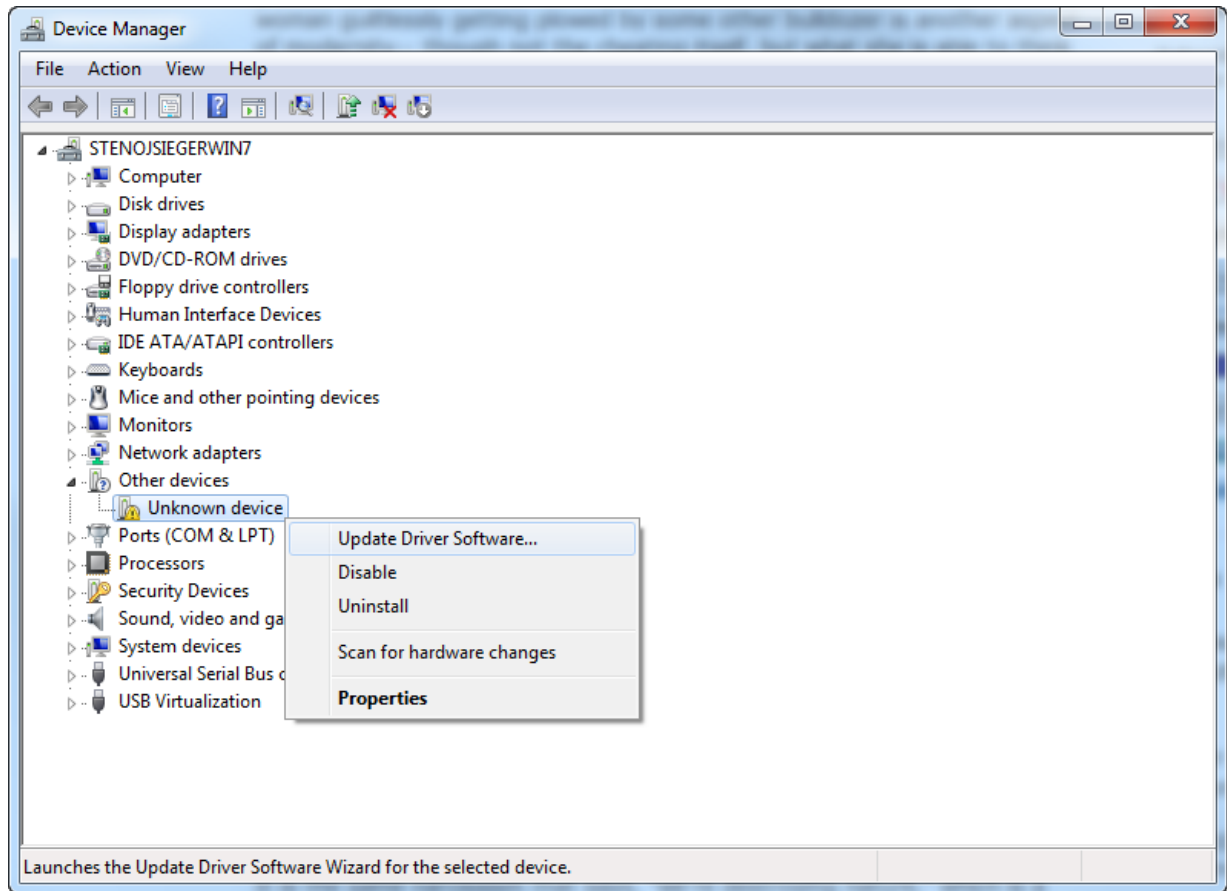

1. Plug the Security Device into a USB port on your computer.

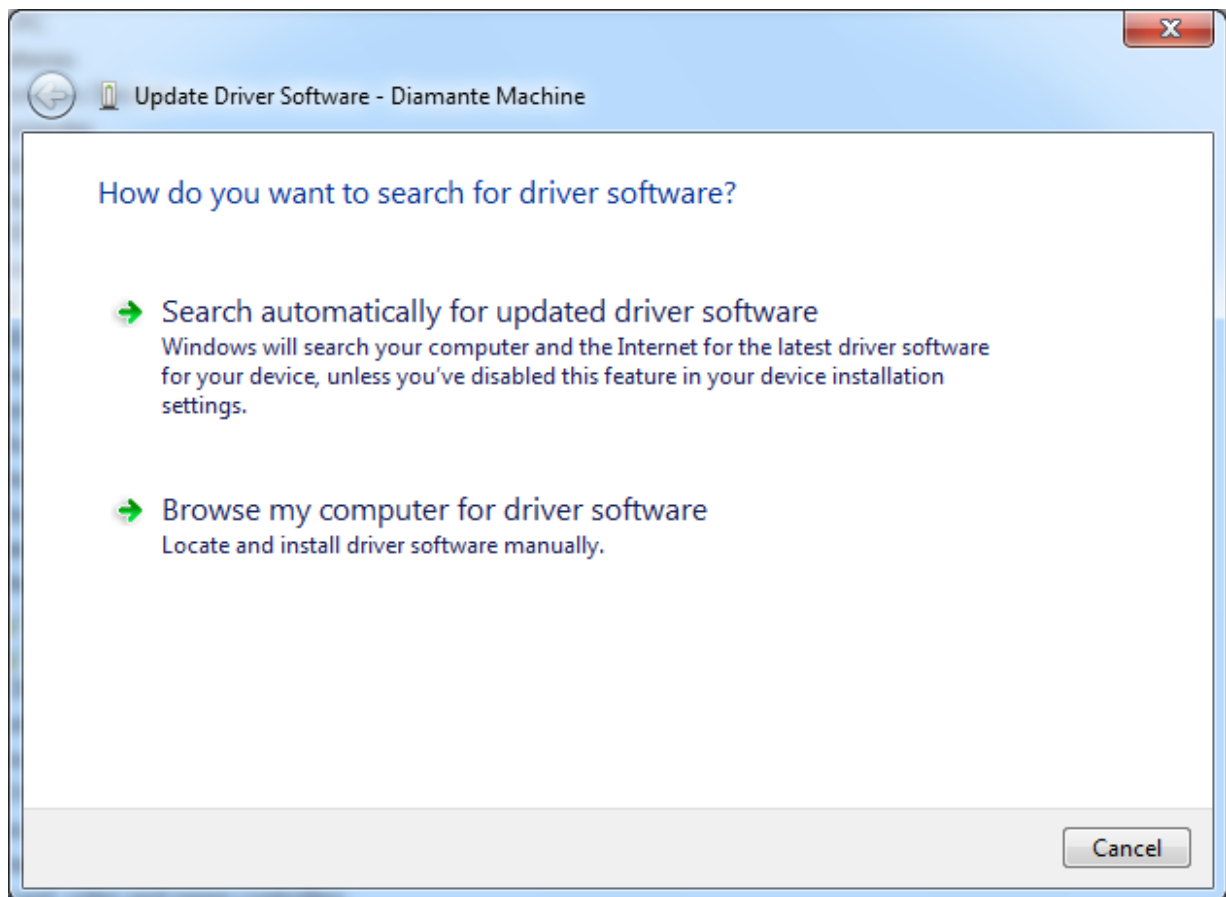

2. Left click on Start , and then in the **Search programs and files** field type "**Device Manager**" and press **Enter**. Device Manager will open.

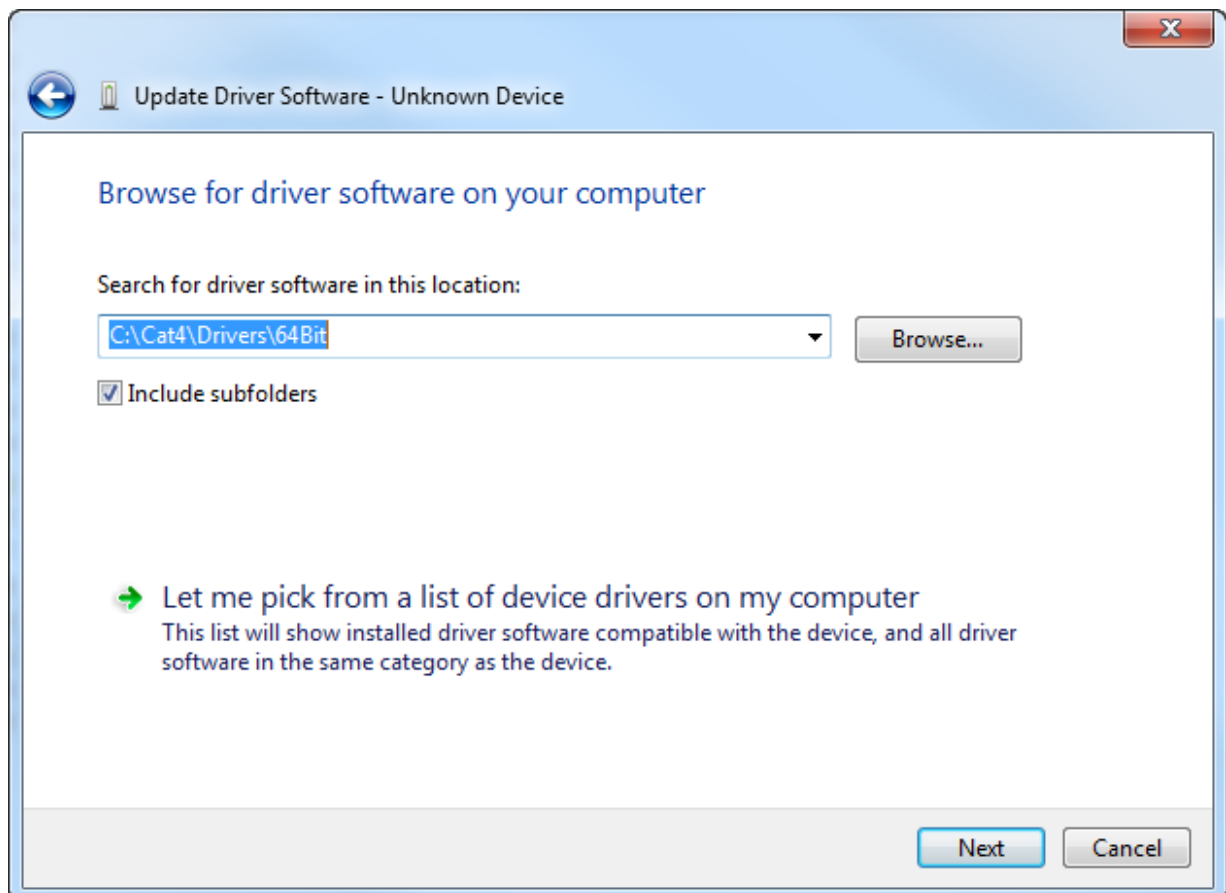

3. In Device Manager look for a category that says **Other Devices**. Below that you should see a yellow exclamation point that says **Unknown Device**. **Right click** on the yellow exclamation point and left click on **Update Driver**.

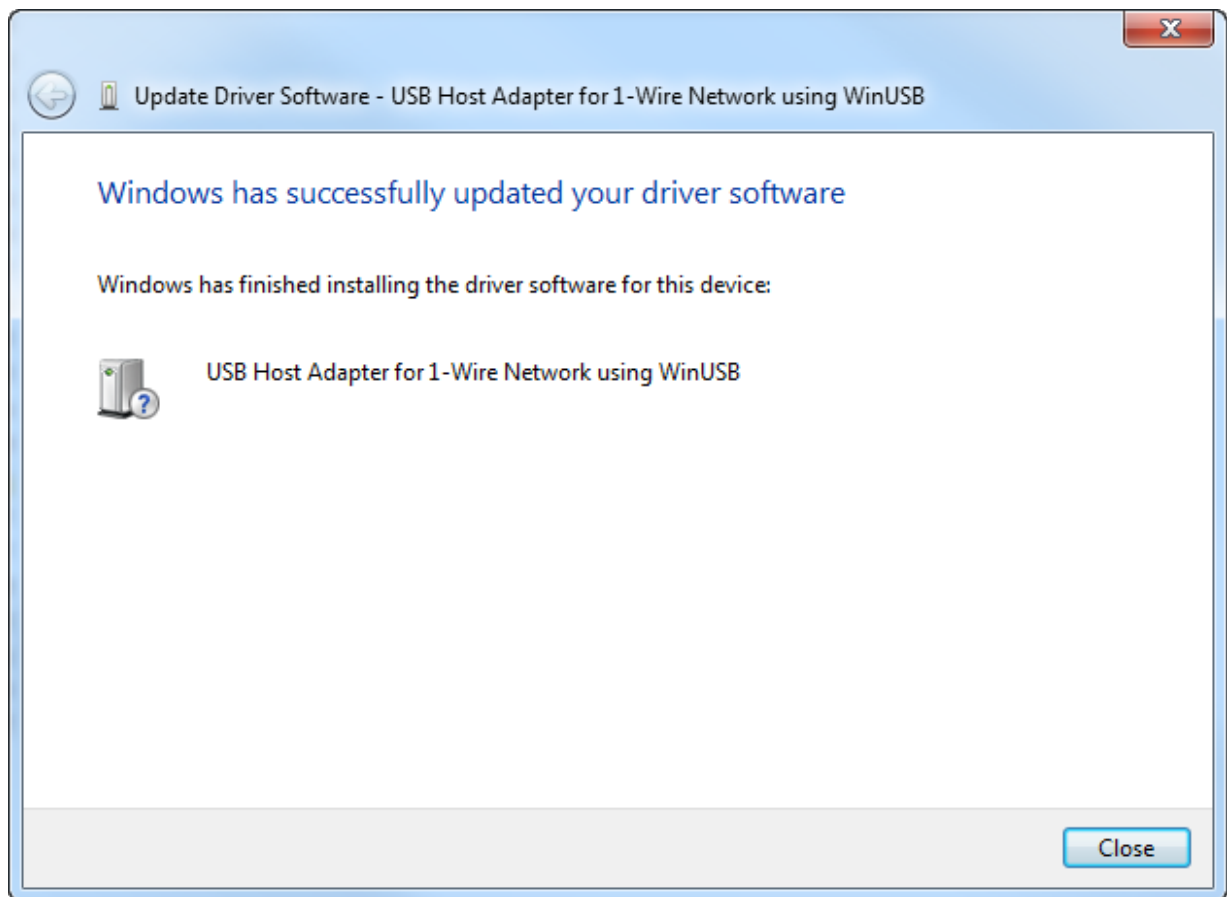

4. The **Update Driver Software** dialog window will appear. Left-click **Browse my computer for driver software**.

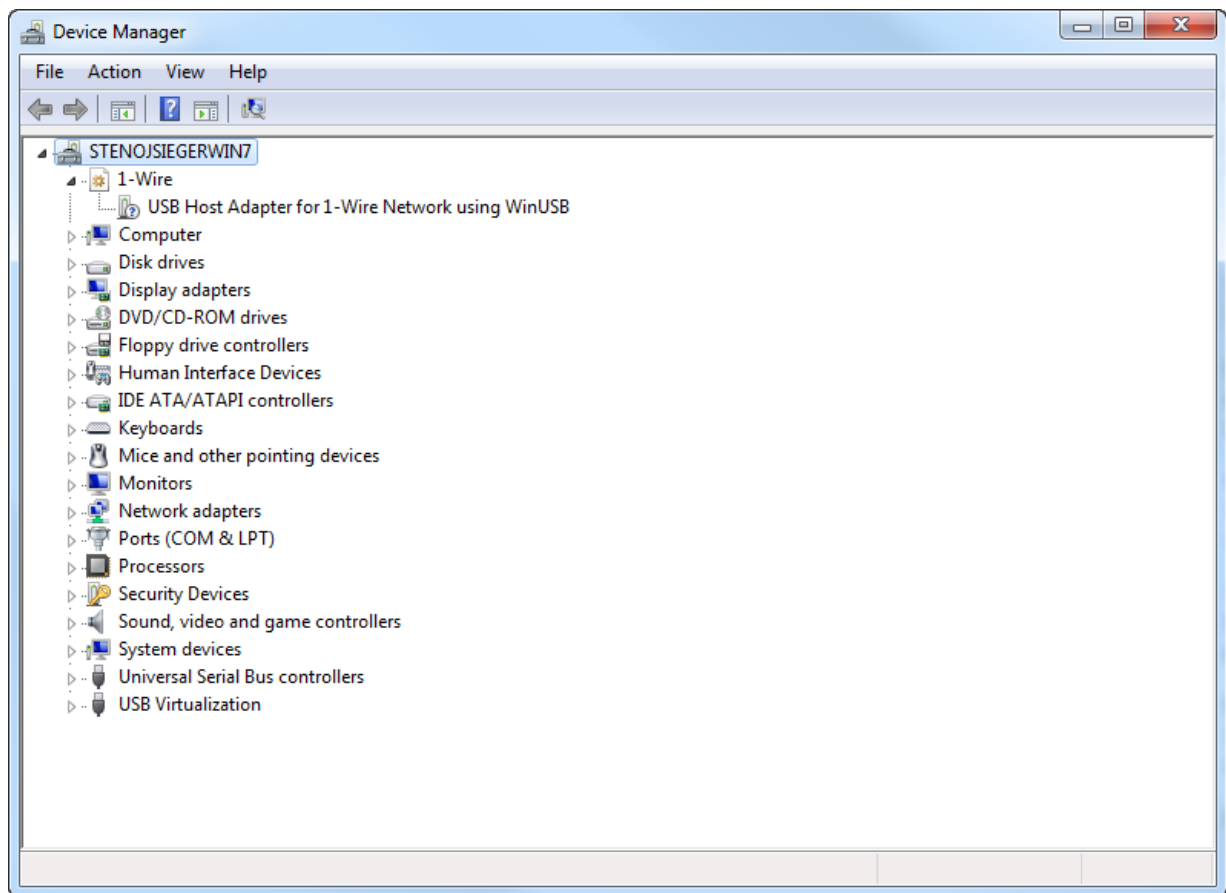

5. In the next screen type **C:\Cat4\Drivers\64Bit** (or copy and paste this text) in the **Search for driver software in this location** field. Then click **Next**.

6. When the Security Device driver has finished installing, click **Close**.

7. A new category will appear that says **1-Wire - USB Host Adapter for 1-Wire Network using WinUSB** without a yellow exclamation point next to it.
